MSc

Public Health and Community Wellbeing

- Focus on health inequalities and community wellbeing
- Develop real-world research and analytical skills
- Build leadership skills for public health careers

Course Overview

Develop the knowledge and skills to address contemporary public health challenges and improve community wellbeing.

This MSc provides an advanced, evidence-informed understanding of how social, economic, environmental, and digital factors shape health outcomes. You will build the analytical and professional skills needed to reduce health inequalities and drive positive change.

Key Features

- Develop advanced knowledge of public health systems, health inequalities, and community wellbeing across local, national, and global contexts.
- Build strong analytical and research skills through engagement with real-world data, evidence, and applied public health challenges.
- Gain a critical understanding of how social determinants, policy, and structural factors influence health outcomes and inequalities.
- Explore digital public health, including the role of technology, data, and innovation in improving population health and access.
- Strengthen leadership and project management skills for delivering public health initiatives within complex and multidisciplinary environments.
- Undertake an applied research project, enabling you to investigate a real public health issue and produce evidence-based recommendations.
- Delivered through a research-informed approach, combining academic theory with practical application to support career readiness.

Modules

- Principles of Public Health and Community Wellbeing
- Epidemiology and Community-Engaged Research Methods
- Global Health Systems and Health Inequalities
- Digital Health for Equity and Community Wellbeing
- Leadership and Project Management for Public Health and Community Wellbeing
- Applied Research Project: Public Health and Community Wellbeing

Career Paths

Public health is a growing and increasingly important field, offering a wide range of career opportunities across healthcare, government, and community settings.

This course prepares you for roles such as:

- Public Health Analysis & Intelligence
- Epidemiology & Health Protection
- Policy & Research
- Programme Leadership & Management
- Public Health Practice, Community Wellbeing & Health Inequalities
- Public Health Consultancy

Graduates may also progress to further study or specialised training in public health, research, or related disciplines.
